EXPERTIndex™ “Exact Match”
Searching
The **EXPERTIndex™** is ToxPlanet’s proprietary index feature. Containing more than 1 million unique substances, and with nearly 5 million terms and synonyms, it is an extremely powerful and efficient tool for chemical searching. When a search is conducted via the EXPERTIndex, results are consistent regardless of which synonym or chemical identifier is used. This yields a more fine-tuned search and results that are 100% relevant. The EXPERTIndex has three different search modes (**Starts With**, **Exact Match**, and **Contains**), and in this tutorial we will look at how to conduct an “**Exact Match**” search.
To conduct an “Exact Match” search, start by clicking the EXPERTIndex™ Search button on the left side of the screen. This brings up a search box and several searching options (Starts With, Exact Match, and Contains). The Starts With radio button is enabled as it is the default setting.
Enter the desired search term in the search box (for example, *phenol*), select the “Exact Match” radio button, and click the Submit button to execute the search.
If there is not an exact match in the EXPERTIndex (for example, if there is a misspelling in the search term you entered (e.g., *phemol* instead of *phenol*)), then no results will be retrieved for your search.
If there is an exact match in the EXPERTIndex, the system retrieves the Chemical Identity page for that substance. Selected information about the substance is displayed in the Chemical Identity page, including structural identifiers, synonyms, classification codes, descriptors, chemical and physical properties, structural representations, and much more. View full-text documents on the substance by clicking on the respective Product Tabs (ChemEXPERT, ReproEXPERT, etc.).
